

# Visual Media Design

Melody Rosado

**I am taking this class because I love technology and design. My career goal is to become a Graphic Designer. Adobe Illustrator is my favorite software thus far!**

**I gravitate towards simple and modern fonts. I will be using a black background to convey a polaroid theme with fun bright colors for contrast.**

Work smarter, not harder.

*Wish you were here!*

# Raster

## Photoshop

For my final raster project, I took a selfie photo from a back-packing trip in Brazil in 2014. I have never been to Machu Picchu so I wanted to teleport myself to another destination that was on my bucket list. I also wanted to create a world where I experienced a super-sized blood orange moon.

# Vector

## Illustrator

For my final vector project, I chose to recreate Yoshi and characters from Super Mario World. I added my selfie from Brazil and Yoshi who was my tour guide. It evolved into a video game theme where Yoshi and I had to collect coins and stars. The obstacle course was climbing Machu Piccu while avoiding the bad guys, Lakitu and Goombas.

# Motion

## Animate

For my final motion project, I reused the Yoshi and Lakitu vectors I created. This time, instead of Lakitu being a bad guy, he helps Yoshi when in need. Yoshi flies his kite in the windy city of San Francisco. A strong gust of wind snaps his kite string and Yoshi loses control of his kite. Lakitu hears Yoshi's cry for help and comes to the rescue by retrieving his runaway kite.

Thank you!
